

DISCOVER A BRILLIANT POLYCARBONATE SHEET

TUFFAK LD MAX B73 High Transmission White Light Diffusing polycarbonate sheet is the ideal choice for first surface digital printed and full vinyl covered faces. The high light transmission allows for bright illumination output making LED backlit graphic signs POP.

Using LED light source will save energy and keep the light source bright and let your image shine.

- » Enhance your digital printed for a more vibrant image
- » Ideal for digital print first surface
- » Superior choice for full decorated vinyl faces
- » Ideal for perforated vinyl applications
- » Excellent weatherability
- » Thermoformable
- » Allows for shallow sign depths for greater design flexibility
- » Two times brighter without the added cost
- » Reduce your spend in lighting while increasing the brightness of your brand
- » Importance of impact in your brand

While traditional TUFFAK sign white maybe still be the best choice for exterior channel letters and deep thermoformed signs, TUFFAK LD MAX B73 White is a new choice in polycarbonate signage. Available in sheet and reels in gauges, 0.118" - 0.177" with standard sign masking configurations.
